

ACCESSORIES for the OpenLine® System

OpenLine® 586 Controller Bus Terminator Module

Part numbers 72-BTF and 72-BTM are used to terminate the 48-pin internal bus on OpenLine® systems. The terminators are not required when two controllers are used (in redundant systems). Otherwise, a terminator module is required per OpenLine® system. Please note that the terminator is not compatible or required with OpenDAC® or OpenLT® systems.

OpenLine® 586 Controller Bus Extension Adapters and Cable Kit

Part numbers 72-CEF-2 and 72-CEM-2 are kits containing two I/O Base-to-cable adapters and the 18 inch cable that extends the 48-pin internal bus on OpenLine® systems. The first kit used in a system is the 72-CEM-2. If a second adapter kit is required then part number 72-CEF-2 is used. Please note that the kit is not compatible with OpenDAC® or OpenLT® systems.

ORDERING INFORMATION

Part Number	Description
Terminators and Extension Adapters	
72-BTF	Female Terminator
72-BTM	Male Terminator
72-CEF-2	Female and Male Terminators and 18" Extension Cable Kit
